---

1600 mm high x 800 mm wide Yellow Safety Man. Cor-flute yellow safety man sign for construction and roadwork sites. Measures 1600 mm high x 800 mm. Safety man signs are used to draw attention to overhead power-lines, pits and other hazards on site.

## Description

---

Core flute yellow safety man sign for construction and roadwork sites. Measures 1600 mm high x 800 mm. Safety man signs are used to draw attention to overhead powerlines, pits and other hazards on site. These life sized construction worker figures help to draw attention to underground equipment and assist plant operators to more easily see where underground monitoring equipment or settlement devices are located.

Additionally, construction worker safety man figures help to draw the attention of the public and passers by, ensuring motorists slow down in construction zones and that they make the connection to the human element of construction work. This helps to keep safety front of mind in construction areas.
